

EQUINE PREMIUM

Protexin's Equine Premium range are products designed specifically to deliver probiotic benefits to your horse.

Each product features a high quality probiotic, as well as Protexin's unique Preplex™ prebiotic; a food source that nourishes the friendly bacteria and helps them grow more effectively.

And each product features a different probiotic strength or formulation, in order to help in the various different situations that might affect your horse.

'Friendly Bacteria' for your Horse

Just like us humans, horses can benefit from probiotics or 'friendly bacteria'. Like us, their system needs help breaking food down into digestible substances – help which comes from the many billions of beneficial bacteria that colonise the gut.

A healthy gut can also mean a healthy immune system. So making sure your horse has its full complement of friendly bacteria – a balanced gut 'microflora' – means you are helping to promote its inner health.

Sometimes a few billion is just not enough...

The friendly bacteria are constantly under threat of depletion by:

- Natural wastage as food passes through
- Stress – from competition or travel
- High energy diet (insufficient fibre).

Which means it is important to keep the 'friendly bacteria' topped up, or to have a means of boosting them in response to specific situations.

Protexin, the leader in animal probiotics, brings you the Equine Premium range - products designed to be easy to feed and palatable for your horse, which deliver the right probiotic benefit in a range of different situations.

gut balancer

A probiotic powder that can easily be added to feed.

Use daily to encourage normal digestive function and to ensure the level of good bacteria are constantly topped up.

Alternatively, use during times of mild stress or digestive upset to help maintain a good balance of bacteria in the gut and support your horse's natural immunity.

Available in 300gms & 600gms for occasional use, and 3kg & 6kg for regular use.

quick fix

A highly concentrated probiotic paste flavoured with tasty peppermint for easy application.

Can help rapidly re-establish your horse's gut microflora over short periods of higher stress such as travel, worming, competition or racing, or when your horse has a change of environment or diet. Can also be used as an aid to maintain appetite.

Available in a handy 30ml syringe for six days' use.

acid ease

A highly palatable probiotic pellet that can easily be added to feed.

With calcium and magnesium carbonate to help calm excess acid caused by stress or low fibre.

Can also help as an occasional aid to efficient digestion.

Available in a handy 10kg tub for ongoing use when required.

Protexin Equine Premium products contain no known prohibited substances as defined by The Jockey club and FEI.
