

Kof-Eze

Complementary feedingstuff containing Lemon, Peppermint & Teatree oil.

Legal Category:

A complementary feedingstuff for horses.

Package:

500 ml containers.

Many animals develop an allergic reaction to tiny dust particles and fungal spores that can irritate the respiratory tract.

The horse evolved as a grazing animal on wide open plains, where he rarely encountered a dust challenge. Consequently his lungs are not designed to cope with the dust to which we subject him. (Among the most obvious are stabling, indoor schools and horse boxes.) Despite owners and trainers best efforts to control the dust burden many animals develop reactions to the tiny particles and fungal spores that irritate the respiratory tract. Often only seen when the animal is exercised; this effect not only impairs performance but also spreads into the lung tissue. Kof-Eze has been formulated for use immediately prior to exercise to minimise this reflex. Kof-Eze includes peppermint extract and teatree oil which have wide ranging attributes. Malt extract and the pleasant aromas of peppermint and lemon makes Kof-Eze palatable even to the most fussy of eaters. Kof-Eze can be used on a daily basis or as needed.

Instructions:

Mix 30-50 ml into a small amount of feed.

Storage:

Store in cool dry place out of direct sunlight.

Contents:

Protein 0% Ash 0.10% Fibre 0.2% Oil 0% Moisture 69.6%.

Ingredients:

Malt extract, Lemon Juice, Peppermint oil, Teatree.

Key Ingredients:
